This paper presents a small wind-solar hybrid power generation system based on multi-agent. The system is composed of wind power agent module, solar power agent module and battery ...

This work assesses the market value of enhanced PV solar power generation forecasting. Then, we analyse the different agents present in the electricity system. We link the ...

This research proposes a novel AI-enhanced hybrid solar energy framework integrating spatio-temporal forecasting, adaptive control, and decentralized energy trading.

The multi-energy complementary power generation system, incorporating wind, solar, thermal, and storage energy sources, plays a crucial role in facilitating the coexistence ...

The multi-agent system established can effectively solve some control problem and enhance its stability and intelligence and can realize utility of new energy, economic ...

A profit-maximization model of virtual power plants (VPPs) in regulated markets was introduced in 46 with solar PV, combined cooling, heating, and power (CCHP), and ...

This comprehensive review delves into the extensive application of multi-agent systems (MAS) in power systems. It provides an in-depth exploration of the fundamental ...

Below, you can find resources and information on the basics of solar radiation, photovoltaic and concentrating solar-thermal power technologies, electrical grid systems integration, and the ...

Then, based on multi-agent technology, we establish the decision-making model of wind-solar hybrid power generation system. According to its function, the whole system is divided into ...

In this paper, we first introduce advanced agent technology into wind and solar energy complementary power generation system, Then we establish the multi-agent decision ...

Agent-based and system dynamics modeling techniques are leveraged in both levels. The proposed models have been developed for residential areas at two different regions in the US ...

Smart grid provides the intelligent and efficient power management system. Upgrade of present power system with multi-agent system (MAS) provides the solution for ...

To achieve that goal, a complex system-of-systems (SoS) model is developed using agent-based modeling (ABM). The model can simulate the complex relationships ...

The wind-solar complementary system without battery power is the most economical mode, and its economic benefits become increasingly obvious over the life of the ...
