OverviewConstructionOperationSafetyDevelopmentApplicationsExternal linksA sodium-sulfur (NaS) battery is a type of molten-salt battery that uses liquid sodium and liquid sulfur electrodes. This type of battery has a similar energy density to lithium-ion batteries, and is fabricated from inexpensive and low-toxicity materials. Due to the high operating temperature required (usually between 300 and 350 °C), as well as the highly reactive nature of sodium and

Commercially-relevant sodium batteries today can be roughly grouped into two primary classes: molten
