What is a case study based on a microgrid with battery storage?

Section 3 presents a simple case study consisting in the robust optimization of a small microgrid with battery storage and aiming at characterizing the influence of the battery model in the design process. Section 4 gives the results associated with this case study and conclusions are presented in Section 5.

What is a microgrid (MG)?

MGs are a set of decentralized and intelligent energy distribution networks, which possess specific characteristics critical to the evolution of energy systems. There exist several definitions of microgrid in the scientific literature ,,,.

Why are microgrids important?

Currently, there is substantial attention on microgrids (MGs) due to their ability to increase the reliability and controllability of power systems. MGs are a set of decentralized and intelligent energy distribution networks, which possess specific characteristics critical to the evolution of energy systems .

Can a hybrid hydrogen-battery energy storage system improve operational flexibility and reliability?

To enhance operational flexibility and reliability, this paper proposes an intelligent energy management system (EMS) for MGs incorporating a hybrid hydrogen-battery energy storage system (HHB-ESS). The system model jointly considers the complementary characteristics of short-term and long-term storage technologies.
