How much does a 100 megawatt data center cost?

When considering the development of a 100-megawatt data center, capital expenditures typically range from \$700 million to \$1.2 billion, translating to approximately \$7 million to \$12 million per megawatt. Construction expenses also vary, often spanning from \$600 to \$1,100 per gross square foot.

How much does a 30 MW data center cost?

In the context of data centers, CapEx can average around \$10 million per megawatt, implying that a 30 MW facility might demand an investment of roughly \$300 million. Advanced AI-driven data centers could see costs exceeding \$20 million per MW.

How much does a data-center cost?

Data-centers: the economics? The capex costs of data-centers are typically \$10M/MW, with opex costs dominated by maintenance (c40%), electricity (c15-25%), labor, water, G&A and other. A 30MW data-center must generate \$100M of revenues for a 10% IRR, while an AI data-center in 2025+ may need to charge \$10/EFLOP of compute.

How much does it cost to build a data center?

American Tower, through its brand CoreSite, has a data center development pipeline totaling \$325.9 million, with 20 megawatts of power capacity and 148k sqft under construction. In turn, this retail and interconnection-focused data center construction pipeline implies a cost to build of \$16.3 million per megawatt and \$2,200 per sqft.

To illustrate the problems with a vague density specification, consider the case of a data center that has the typical specification of 120 W/ft² (1,292 W/m²). To understand what ...

It covers 52 markets, providing a broader view of construction costs across both established and emerging
