How much electricity does a fridge use?

Refrigerators cycle on and off depending on their inside temperature, so their electricity usage varies day to day. To get the most accurate estimate of the cost of running your fridge, you need to calculate your running wattage. To calculate the running wattage, simply divide the total watts by 3. Running Wattage = Kilowatts /3

How do I estimate electricity usage and cost?

Use the calculator below to estimate electricity usage and cost based on the power requirements and usage of appliances. The amount of time and power that each appliance is used varies significantly between households, so for the best results, adjust the usage for each appliance to most accurately reflect your personal usage.

How much does electricity cost per kWh?

This gives an annual electricity cost of \$11. As an alternative calculation, you can work out the kW figure (there are 1000W in 1 kW) and then multiply that by the electricity cost per kWh and then by the amount of time as a percentage of an hour. Here's the Money Saving Expert founder Martin Lewis's explanation of this (UK):

Do refrigerators use a lot of electricity?

Refrigerators generally use more electricity than all other kitchen appliances. Refrigerators use up nearly 14 percent of energy used in the home. One way to get them running efficiently and use less electricity is to make sure the coils get cleaned at least twice a year.
