Why do data center developers need battery energy storage systems?

As a result, data center developers are working toward innovative solutions to meet the growing energy demands of their facilities while also reducing their carbon footprint. Battery Energy Storage Systems (BESS) are emerging as a critical component of modern data center infrastructure.

What is EPC for data centers?

With our EPC for Data Centers services, we offer comprehensive solutions that cover engineering, procurement, and construction. From design to deployment, we ensure your data center operates with unmatched efficiency, reliability, and scalability. Let us be your trusted partner in...

Why should data center developers use EPC power's Bess solutions?

EPC Power's BESS solutions enable data center developers to meet these challenges by providing: Peak Load Shaving: BESS can store excess energy during off-peak hours and release it during peak demand periods, reducing the strain on the local grid and lowering energy costs.

What is a data center Power Usage Effectiveness (PUE) ratio?

The data center industry uses a metric called Power Usage Effectiveness (PUE), which is calculated by dividing total energy consumption of an entire data center facility by the energy consumption of its IT equipment. Modern data centers should aim to have as low a PUE ratio as possible, and ideally below 2.

Most large-scale data centers to date have been built under a design-build (D& B) contract for this reason, but there is now a growing appetite for engineering, procurement and ...

Battery Energy Storage Systems (BESS) are emerging as a critical component of modern data center infrastructure. By providing service to your operation's power grid, as well as secondary ...
