What type of energy storage does a utility need?

Utilities have mainly worked with large-scale energy storage at central generation plants. Most installed capacity is from large-scale pumped hydroelectric storage. However, two compressed air energy storage (CAES) plants have been installed and have operated reliably for several years.

Should a utility deploy an energy storage system?

A utility's decision to deploy an energy storage system should be evaluated against alternative solutions, such as traditional infrastructure upgrades/expansions and competing distributed generation-based alternatives. However, the passage does not directly answer whether a utility should deploy an energy storage system.
