How much energy does a solar system use in San Diego?

Solar installations in San Diego that are always tilted at the latitude of San Diego (Average Tilt at Latitude or ATaL) average 6.03 kWh/m²/day, or about 15% greater than the average monthly GHI of 5.26 kWh/m²/day and approximately 5% greater than the average monthly DNI of 5.76 kWh/m²/day. [1]

How much solar power does California have?

When small-scale solar generation is included, solar energy provided 32% of the state's total electricity generation. 50 At the beginning of 2025, California had about 22,200 megawatts of utility-scale solar power generating capacity, more than any other state.

How much solar radiation does San Diego have?

San Diego, CA has an average annual solar radiation value of 6.13 kilowatt hours per square meter per day (kWh/m²/day). [1] The month with the highest historical solar radiation values in San Diego is August with an average of 6.84 kWh/m²/day, followed by September at 6.67 kWh/m²/day and October at 6.36 kWh/m²/day. [1]

Which month has the highest solar power output in San Diego?

The month with the highest historical solar power output in San Diego is August with an average of 626.87 kWhac, followed by March at 596.57 kWhac and May at 595.25 kWhac. [2]

View all available electricity data in San Diego County, CA. View monthly electricity generation, the breakdown by power source, details on the 151 power plants in San Diego County, CA, ...

How much solar energy does San Diego produce? As of 2019, San Diego was ranked No. 2 nationally for solar power capacity, with 294.8 watts per person and 420.38 megawatts solar ...

How many watts of solar power does san diego generate
