What is a 48V server rack battery?

The 48V Server Rack Battery is a lithium-ion battery(typically LiFePO4 lithium iron phosphate) designed for data centers,telecommunications, and industrial applications, featuring a 48V DC voltage and a standardized rack-mountable design.

Are Natron battery cabinets a good choice for a data center?

Natron's sodium-ion batteries offer superior reliability and industry-leading lifecycle capacity and require minimal maintenance when compared to other data center battery solutions. Our standard battery cabinets do not require any type of active cooling to function properly, eliminating that risk from your operations as well.

What is a battery cabinet / rack?

EverExceed designs customized battery cabinets / racks for individual batteries. The cabinet or racking system can be specified to accommodate any battery cell. From flooded to sealed, from lead acid to nickel cadmium and from vertical to horizontal all kinds of battery cabinet / rack can be designed flexibly to save the space in battery room.

How much power does a datacenter use?

Today's datacenters use an average of 25kW per rack to power AI accelerators, servers, storage, and networking equipment. Most are leveraging a legacy architecture of powering basic CPUs with high levels of efficiency. Hence, the traditional 12V power architecture has been widely accepted and implemented (see Figure 1).

Natron's sodium-ion batteries offer superior reliability and industry-leading lifecycle capacity and require minimal maintenance when compared to other data center battery solutions.

Engineered for use with most type of battery terminal models, these cabinets can fit a wide variety of applications. This solution is completely customizable and flexible to support your ...
