Why do cement and glass makers need integrated process control systems?

Cement and glass makers need integrated process control systems that can improve plant-wide efficiency and productivity. Our award-winning process control solutions provide easy "single window" access to the process, production, quality and business information - from the most remote location to corporate headquarters.

What do we do in the cement industry?

In addition to the product and machinery business, we carry out the planning, supply, installation and commissioning of entire process groups as well as ready-to-use cement plants in the integrated plants category. Modern processes, methods and tools are used in engineering, project management and construction and commissioning.

What is the role of storage and transportation system in cement plant?

In each section of cement plant, storage and transportation system plays a decisive role. For example, raw material homogenization and transportation, clinker storage and transportation, as well as finished cement storage, conveying and distribution. SRON provides bulk material storage and transportation system solutions for cement plant customers.

Why are integrated plants important?

Thus, the tasks of the integrated plants area form the link between sales and service and are an important part of the comprehensive customer service. Integrated cement plant - Experience the epitome of engineering excellence and innovation in cement technology at thyssenkrupp Polysius.

In each section of cement plant, storage and transportation system plays a decisive role. For example, raw material homogenization and transportation, clinker storage ...
