What is investment cost of energy storage system?

The investment cost of energy storage system is the unit power investment cost of energy storage system  $C_{inv}$ , the ratio of rated energy storage power  $P$  rate to energy storage discharge capacity  $W_{disc}$ , and finally the investment cost of energy storage system in CNY/kWh units.

What is mobile energy storage?

As a flexible energy storage solution, mobile energy storage also shows a trend of decreasing technical and economic parameters over time. Like fixed energy storage, the fixed operating costs, battery costs, and investment costs of mobile energy storage also decrease with the increase of years.

What is the total system cost of mobile energy storage?

The total system cost of mobile energy storage is the same as that of fixed energy storage, including investment cost, operating cost, and recovery cost. Unlike mobile energy storage, which incurs transportation costs during energy transportation, fixed energy storage incurs line transportation costs during energy transportation.

How can mobile energy storage systems improve the economy?

With the advancement of battery technology, such as increased energy density, cost reduction, and extended cycle life, the economy of mobile energy storage systems will be further improved. Future research should focus on the impact of new technologies on system performance and update model parameters in a timely manner.
