What are the benchmarks for PV & energy storage systems?

The benchmarks are bottom-up cost estimates of all major inputs to typical PV and energy storage system configurations and installation practices. Bottom-up costs are based on national averages and do not necessarily represent typical costs in all local markets.

Are minimum sustainable price benchmarks effective for long-term PV cost analysis?

By muting the impacts of policy distortions and short-term market fluctuations, the new minimum sustainable price (MSP) benchmarks provide an effective basis for long-term PV cost analysis. However, they do not represent dynamic market conditions and should not be used for near-term policy or market analysis.

What are the cost parameters for a commercial Li-ion energy storage system?

Commercial Li-ion Energy Storage System: Modeled Cost Parameters in Intrinsic Units Min. state of charge (SOC) and max. SOC a Note that, for all values given in per square meter (m²) terms, the denominator refers to square meters of battery pack footprint. The representative system has 80 kWh/m².
