Do storage systems affect the overall deviation in Hamburg Mitte?

However, in this case study the storage systems reduce the overall positive deviation between demand and supply by 7.15%. The underproduction is also reduced by 7.13%. Therefore, the storage systems affect the overall deviation in Hamburg Mitte. However, this improvement is not enough to sustainably use renewable energies in the future.

What smart grid technologies are available in Hamburg?

The selection of smart grid technologies for investigation was done by examining their availability in the HafenCity and the Port of Hamburg. This includes established energy storage solutions like pumped hydro storage systems. Hereby, the hydro pump station near the city of Hamburg is used to provide realistic data.

How can energy storage be used without changing the demand?

Energy Storage The most common way to change the energy needed without changing the actual demand is energy storage solutions. Hereby, the stored energy can be fed into the grid when the supply drops below the demand and can be stored when the supply is higher than the demand.

How does the port of Hamburg affect energy demand?

In addition, the strong deviations of the HafenCity's energy demand are dampened by the demand of the Port of Hamburg. Thus, connecting more districts of Hamburg or even other cities in Germany or the European Union can have similar effects.
