Are IP67 lights suitable for outdoor use?

This makes IP67 lights ideal for wet environments, such as docks, industrial wash-down areas, and landscape lighting near water features. Selecting the correct IP rating for outdoor use depends on the environmental conditions and the level of water exposure your lighting fixtures will face.

What is IP54 & how does it work?

A Complete Guide to Electrical Enclosure Protection IP54 is one of the most common ingress protection (IP) ratings used for electrical guide cabinets, industrial enclosures, and outdoor equipment. It defines a specific level of defense against dust and water, based on the international standard IEC 60529.

Can IP54 enclosures be used outdoors?

Yes, IP54 enclosures can be used outdoors, but only in light weather conditions. They protect against dust and splashes, so they're fine under awnings or in sheltered spots. For heavy rain or full exposure, a higher rating like IP65 or IP67 is better.

Should you choose IP54 or IP67 waterproofing?

IP54 is a good choice if you just need basic protection from light moisture and dust--without paying extra for waterproofing you don't need. Choose higher IP ratings like IP65 or IP67 if your equipment will be in harsh environments, such as construction sites, outdoor areas with strong rain, or dusty factories.
