Does Valenciaport have a 5G network?

With this goal in mind, Valenciaport has embarked on a project to develop and implement its own 5G network ready to work without cables or ties to external operators, with more than 25,000 connected devices (phones, vehicles, surveillance cameras, environmental sensors, security services, drones, etc.).

Will 5G SA become a smart port?

For Javier Gallego, head of Technologies at the PAV, 'our 5G SA network is one of the fundamental pillars to achieve the goal of becoming a definitive smart Port, based on two pillars: security and mobility'. The solution will integrate market-leading technologies and solutions with a 5G private network core in its Stand-Alone (SA) mode.

What is the port of Valencia project?

This project is a key tool for the Port of Valencia to advance in its digital transformation and become a benchmark in Smart Port or Port 4.0.

Will the port of Valencia be a future-proof site?

The performance of the network will be guaranteed by technology, and the improvement of the user experience will be a reality in 2027, making the Port of Valencia a future-proof site with a great capacity to adapt to changes in the market and technology.

Dec 15, 2024 · Changes in wind and solar energy due to climate change may reduce their complementarity, thus affecting the stable power supply of the power system.

To achieve this, the project will deploy a 5G standalone (SA) mobile private network (MPN) in Valencia, Spain. What will it provide? The project will enable the digitalisation of ...

Port of Spain 5G solar-powered communication cabinet wind power construction
