Where does solar energy come from in T&#252;rkiye?

A large part of solar energy in T&#252;rkiye originates from unlicensed power plants. Hybrid power plants: Hybrid plants generate electricity from a primary and secondary source connected to the grid at the same location. Solar is the secondary source for all operational and planned hybrid power plants in T&#252;rkiye.

Did wind power overtake coal power in T&#252;rkiye in 2024?

Wind and solar power in T&#252;rkiye permanently overtook electricity from domestic coal in 2024, even surpassing domestic coal power's historic peak. Ember's T&#252;rkiye Electricity Review, published for the fourth consecutive year, analyses T&#252;rkiye's electricity generation and consumption data in 2024.

What happened to solar power in T&#252;rkiye in 2024?

In 2024, solar power in T&#252;rkiye increased by a record 39% year-on-year. This pushed solar's share of electricity to 7.5%, up from 5.7% in 2023. Wind remained steady at 10.7%, close to the previous year's level of 10.6%. As a result, the total share of wind and solar in electricity generation surpassed 18%.

Is solar a primary source for hybrid power plants in T&#252;rkiye?

Solar is the secondary source for all operational and planned hybrid power plants in T&#252;rkiye. Turkey's policy instrument to incentivize the installation of utility-scale wind and solar power plants is the Renewable Energy Resource Areas (YEKA) scheme.
