Did a lithium battery catch fire on Air China flight?

A lithium battery caught fire on an Air China flight, forcing an emergency landing. No one was hurt, but the incident highlights the risks of power banks and new airline rules banning in-flight charging to keep passengers safe.

Did a faulty power bank cause the Air Busan plane fire?

A fire that destroyed an Air Busan plane in January has prompted a closer examination of lithium-ion battery safety. A faulty power bank was the likely cause of the blaze that engulfed the plane at South Korea's Gimhae International Airport, according to interim investigation results released on Friday by the country's transport ministry.

Will lithium battery overheat on a plane in China?

The move, which applies to anyone boarding a flight in China, follows a series of incidents globally involving lithium battery products, including power banks, overheating on planes. Learn about the latest breakthroughs in AI and tech with the Reuters Artificial Intelligence newsletter. Sign up here.

Why did Air Busan ban portable batteries & e-cigarettes?

The decision comes in an effort to address concerns over potential portable battery fires, the ministry said, though the cause of the fire on the Air Busan aircraft has yet to be determined. Transport ministry also prohibits passengers from storing portable batteries and e-cigarettes in overhead cabin bins.
