-----  
Why are subsea communications cables becoming more popular in Southeast Asia?

Since subsea communication cables account for over 99 percent of intercontinental data capacity and demand for them continues to rise despite the availability of satellites in low Earth orbit, the number and sophistication of cables traversing Southeast Asia will keep growing. 10

Who is the largest subsea cable supplier in Southeast Asia?

(Author's note: This figure is based on publicly available knowledge as of December 2024) While Japan serves as the largest subsea cable supplier for most Southeast Asian countries, China holds the dominant position in Cambodia (Figure 2).

Which countries are developing subsea cable networks in Southeast Asia?

Beyond the US and China, Southeast Asian countries have engaged multiple players, particularly Japan, France and Germany, in developing their subsea cable networks. The significant presence of these third countries defies the binary US-China narrative in developing the region's subsea cable infrastructure.

Do Southeast Asian states have sufficient maritime capabilities?

Southeast Asian states may not have sufficient maritime capabilities to patrol and/or utilize surveillance technology to detect threats to submarine cables in their own territorial seas, archipelagic waters and EEZs given the vast extent of these areas and disparities in maritime capabilities discussed in Section 3.1.

This demonstrates that the global infrastructure relies on a diverse set of suppliers beyond the two superpowers, indicating a more multipolar landscape where various nations, ...

The HJ-SG-D01 Outdoor Communication Single Warehouse Cabinet is designed for rugged outdoor environments, featuring an IP55 protection rating and salt spray resistance up to 500 ...
