---

Abstract Conceptual design studies have been conducted to identify Compressed Air Energy Storage (CAES) systems which are technically feasible and potentially attractive for ...

Fire safety risks from batteries in electric vehicles An electric vehicle (EV) battery fire releases the stored chemical energy, causing a rapid increase in temperature known as "thermal runaway". ...

MIT engineers developed a membrane that filters the components of crude oil by their molecular size, an advance that could dramatically reduce the amount of energy needed ...

The new Schmidt Laboratory for Materials in Nuclear Technologies (LMNT) at the MIT Plasma Science and Fusion Center accelerates fusion materials testing using cyclotron ...

In MIT course 15.366 (Climate and Energy Ventures) student teams select a technology and determine the best path for its commercialization in the energy sector.

The goal is to have it operational next year. Rocky Mountain Power is intent on someday replacing its coal-fired power plants with technology like TerraPower's Natrium ...

Enter energy storage power stations - the unsung heroes of modern electricity grids. These technological marvels act like giant "power banks" for cities, storing excess ...

The Power Control System (PCS) realizes the primary function of the M-GES plant (also the energy storage plant) - power balancing. The PCS is the unit dispatch system and is ...

A study by the Southwest Energy Efficiency Project showed that the installation of EV electrical equipment
