What is a PV combiner box?

A PV combiner box is more than just a metal enclosure with some wires inside. It's a critical safety component that protects your solar power system from damage and ensures reliable operation. To choose the right combiner box, it's important to understand the essential features that it should have.

How are PV DC combiner boxes tested?

PV DC combiner boxes are tested according to IEC-61439-2 and are constructed on the basis of the test results as well as assembled for the specific application. This ensures that each of the requirements of the target application is fully met.

What size PV combiner box do I Need?

The size of the combiner box depends on the number of PV strings and the current and voltage ratings. Calculate the total input current and voltage to ensure the box can handle the load safely and efficiently. Choosing the right size PV combiner box is one of the most important decisions in designing a solar power system.

Why should you choose LS solar combiner boxes?

As developed based on customers' needs, LS's PV combiner boxes provide optimum connections and protections from the modules to the inverters. High reliability and safety. Optimized for solar power plants. The enclosure was made of metal (SS304) to increase durability. It is designed based on the latest IEC standards and has been certified as CB.
