Why is battery manufacturing a growing trend in Europe?

The domestic build-out of battery manufacturing capacity accompanies another trend: growing foreign investment in US and European plants. The overwhelming majority of operational European battery-cell manufacturing capacity comes from companies with headquarters abroad.

Does Europe import batteries?

Even for cells and modules, rising manufacturing capacity obscures heavy European reliance on imports, while many batteries produced in Europe are shipped abroad. In 2023, Europe imported batteries worth \$35 billion, and exported a quarter of that amount (Figure 6).

Where do European batteries come from?

The overwhelming majority of operational European battery-cell manufacturing capacity comes from companies with headquarters abroad. The largest operational facilities belong to LG (South Korea), Samsung (South Korea), CATL (China) and SK (South Korea).

How much EV battery does Europe import in 2023?

In 2023, Europe imported batteries worth \$35 billion, and exported a quarter of that amount (Figure 6). Exports primarily go to North American facilities that largely serve the US EV market, while Europe imports cheap batteries from China to fill the domestic demand gap (Figures 7 and 8).

The young man who has written for twenty years about the folly of U.S. foreign crusades, about our unwitting walk into the "jaws of a trap" set for us by Al-Qaeda, about our "self-defeating" ...

BayWa r.e. Solar Trade, one of the world's leading distributors of photovoltaic solutions, is expanding its offering in the commercial energy storage segment across Europe.
