How do I choose a generator set?

Other key factors when choosing a generator set are the type of fuel (diesel, hybrid, gasoline or gas), the need for mobility (fixed or portable), the level of soundproofing, the possibility of integration with control systems (BMS or SCADA), and compliance with specific regulations such as ISO 8528-1 or ATEX requirements in hazardous environments.

What type of generator do I Need?

For domestic use, up to 18 kW, you will need a single-phase generator set, except possibly for some very energy-intensive equipment such as heat pumps. For professional use, you will probably need a three-phase generator set to supply machines that require more power. Some three-phase generator sets are equipped with single-phase outlets.

How safe is a generator set?

The generator set must be able to provide the peak power consumed by all the equipment that needs to start at the same time. For resistive equipment (lighting, television, small electrical appliances, etc.), a safety factor of 30% must be added when determining the power of the generator set.

What makes a low power generator set a good choice?

"Inverter" technology that allows you to adapt the speed of the motor to the equipment consumption and also allows you to optimize the use of your generator set. The cooling system: low-power generator sets are air-cooled and not designed to run all the time.

This article explores in depth the key considerations, technical requirements, and practical applications of pairing diesel generator sets with low-voltage distribution cabinets, helping ...

A generator set is a device used to produce electricity. It is made up of an electric generator and an engine mounted together. Generator sets can be used as the main or auxiliary source to ...
