How deep are server rack cabinets?

Depth is the least standardized of the various server cabinets. Height can be in rack units (U) and width at 19 inches, but depth requires more precise attention. That's why it is so crucial to know about the standard server rack cabinets depth range.

How high should a server cabinet be?

The vertical pillars in a server cabinet are normally marked from 1 and the bottom of a rack to the top U height which can be from 4U up to 47U or higher. To accommodate equipment not designed to be rack mounted, additional shelves (fixed, adjustable, and telescopic) can be added to a server cabinet.

Will a 600mm server cabinet fit through a standard doorway?

A 600mm server cabinet will fit through a standard doorway but an 800mm may not. For this reason, we offer flat packed server cabinets for assembly on site once placed into the location they are to be used within.

What dimensions should I consider when selecting server cabinets?

There are three dimensions to consider when selecting server cabinets: cabinet depth, height, and width. The first is to determine the depth of cabinet required. From our server cabinet ranges this will determine the cabinets available. The reason for this is that each cabinet has a maximum internal depth.

A guide to selecting server cabinets with some of the most important FAQs covering how to size a cabinet width, depth and height, typical colour and door options, delivery times, accessories ...

To determine the ideal depth for your server cabinet, begin by measuring the total depth of your deepest piece of equipment. You'll want to include rear cable clearance and ...

800mm is quite a common depth for server racks. If you look at measurements (including rail specs) and
