## What is a microgrid system?

Microgrids are decentralized energy systems consisting of a combination of renewable power generation, power storage and conventional power generation in order to meet a given demand. Microgrid solutions help sustain the future of energy and ensure reliable power supplies to meet customer demands.

## Why do we need a microgrid?

Microgrid solutions help sustain the future of energy and ensure reliable power supplies to meet customer demands. Economic growth and growing populations are changing customers' demand for power. Governments and industry are moving towards renewable energy sources such as solar and wind power.

## How can a fully integrated microgrid benefit your business?

A fully integrated microgrid will significantly improve the energy cost profile of your business, lowering your energy bills. Throughout Australia, we specialise in providing microgrid solutions for a range of sites, ranging from commercial centres to industrial depots to residential estates / communities.

## How can microgrids improve energy security & decarbonisation?

Decarbonisation through Microgrids: Emphasizing the replacement of fossil fuels with renewable energy sources. Decentralisation: Focusing on off-grid and rural/remote applications, including island communities and underserved areas. Energy security: An overarching theme incorporating the reliability and resilience aspects of microgrids.

Microgrids provided by Aggreko are tailored to specific requirements of the individual customers and available as a service for short- and long-term projects all over Australia, New Zealand ...

The MG100K is a high-performance all-in-one energy storage system with 100kW output and 207kWh capacity, ideal for microgrids, industrial backup, and solar integration. Featuring ...
